Product

Product description:

Our composite products are made from glassfibre reinforced polyamid (PA12), developed for high strength and long life.
The material technology together with the design makes the Isiflo products industry in strength and performance.
Our composite couplings are lead free and corrosion resistant, which results in environmental friendly products with a very long lifetime.

Isiflo Sprint is a group of push-in couplings that combines strength, safety, durability and user friendliness.
The interaction between the push-back ring, O-ring and the clamp ring gives a safe, leak free and tensile connection without the use of special tools.

LCA: Calculation rules

Declared unit:

1 kg Isiflo Composite - Europe

Cut-off criteria:

All major raw materials and all the essential energy is included. The production processes for raw materials and energy flows with very small amounts (less than 1%) are not included. These cut-off criteria do not apply for hazardous materials and substances.

Allocation:

The allocation is made in accordance with the provisions of EN 15804. Incoming energy and water and waste production in-house is allocated equally among all products through mass allocation. Effects of primary production of recycled materials is allocated to the main product in which the material was used. The recycling process and transportation of the material is allocated to this analysis.

Data quality:

Specific data for the product composition are provided by the manufacturer. The data represent the production of the declared product and were collected for EPD development in the year of study. Background data is based on EPDs according to EN 15804 and different LCA databases. The data quality of the raw materials in A1 is presented in the table below.

1. The results of this environmental impact indicator shall be used with care as the uncertainties on these results are high or as there is limited experienced with the indicator
2. This impact category deals mainly with the eventual impact of low dose ionizing radiation on human health of the nuclear fuel cycle. It does not consider effects due to possible nuclear accidents, occupational exposure nor due to radioactive waste disposal in underground facilities. Potential ionizing radiation from the soil, from radon and from some construction materials is also not measured by this indicator.
